WRITEN OPINION OF THE INTERNATIONAL PRELIMINARY EXAMINING AUTHORITY

Int	nal application No.	
PCT/	SE2003/001434	

Box No. II Priority
1. This opinion has been established as if no priority had been claimed due to the failure to furnish within the prescribed time limit the requested:
copy of the earlier application whose priority has been claimed (Rule 66.7(a))
translation of the earlier application whose priority has been claimed (Rule 66.7(b))
2. This opinion has been established as if no priority had been claimed due to the fact that the priority claim has been found invalid ((Rule 64.1). Thus for the purposes of this opinion, the international filing date indicated above is considered to be the relevant date.
3. Additional observations, if necessary:
The priority is considered to be valid.
≠

WRITTEN OPINION OF THE INTERNATIONAL PRELIMINARY EXAMINING AUTHORITY

Interest al application No.
PCT/SE2003/001434

Box No. III	Non-establishment of opinion with regard to novelty, inventive step and industrial applicability
The questions vapplicable have	whether the claimed invention appears to be novel, to involve an inventive step (to be non obvious), or to be industrially not been examined in respect of:
the er	ntire international application
claim	s Nos. 20
because:	
the sa relate	aid international application, or the said claims Nos. 20 to the following subject matter which does not require an international preliminary examination (specify):
See PC animal method	• •
the o	description, claims or drawings (indicate particular elements below) or said claims Nos. 13-14 so unclear that no meaningful opinion could be formed (specify):
the by t	claims, or said claims Nos are so inadequately supported he description that no meaningful opinion could be formed.
no i	international search report has been established for said claims Nos. 13-14
the	nucleotide and/or amino acid sequence listing does not comply with the standard provided for in Annex C of the ministrative Instructions in that:
ì	written form has not been furnished
	does not comply with the standard
the	computer readable form has not been furnished
	does not comply with the standard
the the	tables related to the nucleotide and/or amino acid sequence listing, if in computer readable form only, do not comply with technical requirements provided for in the Annex C-bis of the Administrative Instructions.
Sc Sc	e Supplemental Box for further details.

WRITEN OPINION OF THE INTERNATIONAL PRELIMINARY EXAMINING AUTHORITY

Reasoned statement under Rule 66.2(a)(ii) with regard to novelty, inventive step or industrial applicability; Box No. V citations and explanations supporting such statement 1. Statement Claims Novelty (N) 2-12, 15-19 and 21 (Y) Claims Inventive step (IS) Claims Claims 2-12, 15-19 and 21 (N) Industrial applicability (IA) Claims 2-12, 15-19 and 21 (Y) Claims

2. Citations and explanations:

The following documents have been found to be relevant:

D1: EP 0 743 067 A2

"Use of urea and thiourea compounds for elimination or detoxification of superantigens from body fluids"

D2: WO 02/076930 A2

"Substituted diarylureas as stimulators for FAS-mediated apoptosis".

D3: "A highly sensitive and rapid ELISA for the arylurea herbicides diuron, monuron and linuron". Schneider et al J. Agric. Food. Chem. Vol 42(1994)p413-422.

Novelty (N)

The claimed invention relates to arylurea compounds and separation matrix for affinity chromatography thereof.

The problem to be solved is to develop alternative IgG-binding ligands in order to avoid the disadvantages of known IgG-binding ligands (pages 5-7 description).

The applicant has identified a binding site that exhibits the spatial conformation specific for human kappa IgGs of all subtypes (page 5, last paragraph). The claimed invention provides ligands to the identified binding site (Arylureas on Figure 3).

WRITE OPINION OF THE INTERNATIONAL PRELIMINARY EXAMINING AUTHORITY

Supplemental Box

In case the space in any of the preceding boxes is not sufficient. Continuation of: $Box\ V$

Document D1 discloses material which has a highly selective absorption of super antigens containing urea bonds or thiourea bonds. Figure 1 in document D1 shows the advantages of using urea-bonds compared to benzene-rings in separation matrixes. The formulas I-III show alternative urea compounds according to claims 4, 13, 24 and 32.

Document D2 comprises urea compounds (formula I) for bioassays (claim 20) and for the treatment of autoimmune diseases.

Document D3 disclose diuron, monuron and linuron compounds (figure 1 compounds 6-10), arylurea compounds useful as enzyme tracers or coating antigens (page 414, first column).

The claimed arylurea compounds and separation matrix for affinity chromatography are not considered to be within the scope of documents D1-D3, therefore claims 2-12, 15-19 and 20 are considered to be novel.

The feature arylurea is merely one of several straightforward possibilities from the similar structures presented in documents D1-D3, which the skilled person would select, in accordance with circumstances, without the exercise of inventive skill, in order to solve the problem posed.

The invention according to claims 2-12, 15-19 and 21 is not considered to involve an inventive step.

WRITE OPINION OF THE INTERNATIONAL PRELIMINARY EXAMINING AUTHORITY

Interpolal application No.
PCT/SE2003/001434

Box No. VIII Certain observations on the international application

The following observations on the clarity of the claims, description, and drawings or on the question whether the claims are fully supported by the description, are made:

Present claim 1 relates to urea compounds defined by reference to a desirable characteristic or property, namely "compound having affinity for human IgG of k-type".

The claim cover all urea compounds having this characteristic or property, whereas the application provides support within the meaning of Article 6 PCT and / or disclosure within the meaning of Article 5 PCT for only a very limited number of such compounds. In the present case, the claims so lack support, and the application so lacks disclosure, that a meaningful examination over the whole of the claimed scope is impossible. Independent of the above reasoning, the claims also lacks clarity (Article 6 PCT).

Consequently, the examination has been carried out for those parts of the claim which appear to be clear, supported and disclosed, namely those parts relating to the urea compounds in figure 3.
